Krimulda Church
and the cultural and historical environment around it

Jānis Zilgalvis, Dr. arch., a full member of the Latvian Academy of Sciences

Abstract. Krimulda Lutheran Church is located at Krimulda Parish of Riga Region. Together with the rectory building, the place of worship is included in the list of the State protected cultural monuments. Over time, the cultural and historical environment consisting of historical evidence archaeological sites, landscape elements, etc., in the vicinity of the church has little changed, the spatial structure of planning is also retained. With regard to today's activities, it must be ensured that the environmental quality is not compromised. That's why its research remains topical and necessary in the broad neighborhood context.

Keywords: protection and preservation of the architectural and cultural heritage, landscape architecture, protection of the cultural and historical environment

Introduction
Churches are one of the most typical components of the Latvian rural architecture and landscape. Over time, many buildings of this typological group have been destroyed, demolished and have collapsed. Despite the fate, other ones have reborn and serve the needs of the modern society. The nearest and distant cultural and historical environment of this place of worship consists of a range of historical, architectural, and archaeological evidence. Each of them has its own meaning and connection to the church, including the parsonage building which consisted of not only the pastorate but also of other buildings such as the servant house, stable, cattle-shed. A specific role in the creation of the expressiveness of the ensemble was also played by the landscape and natural elements – the terrain, road network, separate plantations, and their arrays. This applies to Krimulda Lutheran Church the surroundings of which are particularly rich in cultural and historical evidence. A large proportion of them is a story of the survival and their cultural space has kept its authenticity. It is a value which must be protected and defended of thoughtless formations or works. Therefore, the need was urgent to focus on the research of the ancient place of worship in a broader environmental context.

The history of construction of the church
Krimulda (Kremom) Church is now the oldest, recognized as serving to its task church in Latvia. The building was built from 1205 until 1206 from boulders and dolomite, its oldest part, attributable to the 13th century, is the altar part. It is covered with a dome-shaped arching divided into eight sectors. Originally, the rib bricks were rough and contrasted with the white vaulted sails. Over time, the ribs and vaults were covered with lime mortar and during the repairs of 1902–1905 with a thick cement mortar that changed their subtlety. The sacristy adjoins the northern wall of the altar room where there are two rooms. The sacristy was built simultaneously with the altar room and it is already mentioned in the documents of 1207. At the end of the 19th century, its was extended. The church has one nave, the congregation room is covered with a barrel vault, from the altar part it is separated by a wide triumphal arch. The long life of the church is full of events. Originally, it was called Kubesele Church and it was built under the leadership of Priests Alebrant (Alobrandt), soon after returning of Caupo from his trip to Germany and Rome. The name of Kaupo is mentioned in the Chronicle of Henry of Livonia in 1200 and he was called the Liv King of Turaida (Treyden) Municipality [1]. It is possible that his ashes (he was killed in the battle of 1217) were buried in the altar part of Krimulda Church.

In 1630, the church had no rafters and the roof, and only the ridge was covered with straw. Around 1640, the Riga builder Jirgen Horn (J. Horn) restored the church. In the audit documents of 1643, it is found that the church is ready, just without having the ceiling – so the restoration works continued to be sluggish. In 1669, it is mentioned that the church is still without the ceiling and the bell is hanging on scaffolding erected on the hill. In 1699, the builder and carpenter Henrich Vede (H. Vede) built a baroque tower, installed a roof, made windows. The indoor spaces were also fitted out. In 1701, the openings were widened. In the same year, the Riga master Lars Nilson Spaak (L. N. Spaak) corrected the church walls, built three pediments with fachwerk, a number of low and narrow window openings were made wider and higher [2]. In the subsequent years, repair works were carried out several times. The church is depicted in the drawing made in 1794 by J. Ch. Brotze (J. Ch. Brotze) [3]. It shows a little...
The church greatly suffered in 1917 and 1918, the tower was gunshot, the window panes were broken, almost all of the old historic church equipment items were dragged out. Only the big silver bowl (1768) and the small altar hanging were left over. In 1920, the church was brought in proper order. In 1929, on behalf of the Board of monuments, the architect Pēteris Ārends studied the church, carried out photo fixation and measurements. He has also described art items, such as the altar hanging of dark red velvet with...

a white silk lining, with golden fringes. In the middle, a cross sewn in gold, around it ivy and laurel leaf garlands are sewn on from lighter greenish yellow velvet. On the other side, under the lining – “Catharina von Dahl, geb. von Wilcken. Engelhardshoff, den 25 sten Mai 1867.”

The fate of the church during the Soviet times and later

During World War II, the church did not suffer. In 1949, a list of the items of the cult was drawn up. It included two electric chandeliers, two baptismal fonts, the collection plate, four candelabras with multiple arms, two candlesticks with one candle, three tablecloths, a flower vase, carpets, wooden boards with numbers, two old wooden tables, six old damaged chairs, worn velvet runners, an old hearse, an old metal goblet, a dish, an old Bible, song books, a carafe, a glass and a tray [5].

In 1953, a list of the architectural inventory is drawn up. The above mentioned wooden loft, the altar with a crucifix, the old altar with three paintings (1724 and 1865), the pulpit with the caret, 13 parishioner benches, a damaged pipe organ and a steel bell [6]. During this year, the survey of the building's architectural and constructive elements is also carried out. It is mentioned that the technical condition is satisfactory, the floor - of the red brick screed, the boards are painted in the congregation room, the walls are plastered but damaged in the dressing chamber and the congregation room from leaking of the roof left not repaired, the vault of the altar part is painted in the shades of pink, in some places the plaster has fallen from the cylindrical vault of the congregation room due to the damaged roof, the windows are glazed, only one is broken in the tower entrance, the organ is damaged, the old altar has three oil paintings [7]. As a result of the survey, the above-mentioned drawbacks are demanded to be eliminated.

In 1960, in the result of the pressure from the Soviets power, the church was closed and the congregation was liquidated. The tribulation time started. In 1966, the remaining parts of the pipe organs were collected from Birži (Buschhof), Vārkava (Warkau) and also from Krimulda, and stored in Jēkabpils. By the initiative and support of the District Party Committee and the District Executive Committee, it was decided to build-in a concert organ on the balcony of Oškalna Culture House in Jēkabpils, using the above-mentioned remaining parts and parts of pipe organs from other congregations. But it was not enough for the remaining parts and the cultural activists of Jēkabpils District turned to the Ministry of Culture to get permission to get the pipe organ of Lielstraupe Church being in a quite good condition.

The congregation was renewed at the end of 1988. The revival of the place of worship was initiated by Kaspars Dimiters who presided over the congregation. In 1996, the building was already under the roof, the indoor space was fitted out, bunched were bought, later the pulpit was restored [8]. In 1991, during the repair works of the church, the archaeological monitoring was carried out (archaeologist Jānis Ciglis). Before installing a new brick screed, it was necessary to study the breached and vandalized stairway located in the altar part of the church. One crypt with two burials was studied where two adults and one child were buried. The burials date back to the 17th, 18th centuries. It should be noted that until the autumn of 1990, the church was in the balance sheet of Gauja National Park. It was held in control of the above park in 1978 as an orphan site and it was the initiative of the
administration of Gauja National Park. Before, the scientific and research farm “Krimulda” had to take care of the building but nothing was done. In 1992, the repair works of the congregation room of the church were carried out. It had no floor, no windows, the exposed walls helplessly stared towards you and the places of the beam ends evidenced of the former existence of the loft. In 1994, a Catholic congregation was founded in Krimulda and the Lutherans had to conclude a contract with the newly founded congregation of the property sharing.

The church equipment and the interior

Also, each of the church equipment items has its own story. The old altar appears several times in the photos of A. Birznieks taken in 1920. In its center, the altarpiece “Christ on the Cross” was placed, at the bottom of the altar – in the predella – The Last Supper representation but at the top, the baptismal of Jesus was displayed. The architectural part of the retable consisted of two round freely standing columns on podiums which were supported by a richly profiled eave. The two edges were decorated by strands of acanthus leaves. Above the eave supporting the columns, ball-like decors were placed and the same was also on the top of the retable. These elements were also raised on podiums. The altar was made in 1724 and restored in 1865. It was the given as a gift by the owners of Gräve (Gravenhof) Manor. The pulpit is the evidence of the Baroque time (the first half of the 18th century.). Its body is polygonal, it is surrounded by richly profiled eaves – one along the top, two at the bottom. In each plane of the body, 11 painted blocks were built in. Their shape is rectangular, with a profiled semi-circle top. Round columns are placed in the facets of the body that support the projection of the upper eave. The built-in panels of the pulpit depict the Apostles and Jesus Christ to his full height. In general, the brownish and grayish tones dominate in the paintings. The images of the Apostles are painted in brighter colors. For instance, St. Paul, who is leaning on his sword, St. Peter with keys and an open book in his hands, etc.. In the Soviet times, when the church equipment was destroyed, fragments of the pulpit were delivered to the museum of Rundāle Palace. In 1995, the congregation had an intention to get the above mentioned back from the museum and to reconstruct the pulpit, eight paintings had survived in good condition. This work was accomplished in 1996 and the pulpit began to serve the purpose. The body and the roof were made anew as copies because they were in poor technical condition but the paintings have returned to their places.

The new altar, which was installed in 1870, was formed by a crucifix placed on the mensa. As a copy of the sculpture made by the Danish sculptor Bertel Thorvaldsen (B. Thorvaldsen, 1770–1844), it was made by his student Johann Nepomuk Zwerger (J. N. Zwerger, 1796–1869). The crucifix was given as a gift by the owner of Birini Manor – August von Pistohlkors (A. von Pistohlkors, 1822–1886). It perished in the 1960s. In 1996, several sculptures were made – Our Lady, Saint Francis of Assist and Thinker which were placed in the church. In the altar part, behind the mensa, the sculpture Christ Invites (1996, sculptor Grair Avertyean) was placed. The oak altar table, covered with a granite slab, was installed in 2004 (the interior decorator Maija Avota).

In 1823, the organ was made by Johann Christoph Kristin of Katlakalns. Later, it was sold as useless to Jēkūli School but in 1910 a new organ was built by the firm of Emil Martin (1848–1922) which in 1917 was demolished. In 1926, a new organ made by the Riga organ construction firm H. Kolbe and J. Dūrejs was consecrated. Its fate is already mentioned above.

The old church bell was cast in 1635, in Stockholm but in 1977 it was broken and in 1878 was recast by J. Schwenn. In 1895, a new bell was consecrated, making of which was funded by both congregations of Krimulda – the German and Latvian ones. It was made in Germany, Bochum. During World War I, by the Government order, the bell was evacuated to Nižņijnovgorod in Russia and back into 1922 [9].

Until World War II, in the altar room above the door that leads to the pastor’s room a black stone plaque was affixed with the inscription – Anno 1205 im 8 ten Jahre des 3 ten Rigischen Bischofs Albert Buxhowieden zu Apeldern ist hier zu Cubbesele bey der Burg des Livischen aeltesten Caupo diese kirche, nachmahls Kremon genant vom priester Alobraundt erbaut worden ...  

The rectory

The rectory is located in the immediate vicinity of the church. The rectory is a distinctive sample of the wooden architecture of the Classicism period. According to the information available by the priest Jānis Ērmanis (1862–1932), it could be built by the initiative of the owner of Krimulda Manor – von Helmersen in 1775 [10]. The building is a log house with a steeped pitched roof, the ends of which are partially oblique. Two porches can be seen in one longitudinal facade near the entrance, in the other one a portico was located. Originally, there was only one porch - verandah on the right side [11]. The construction form of the building is traditional, gently rounded, rather unwieldy. The old classical door sashes were valuable monuments of art (the first half of the 19th century) which have now
been replaced by new, similar ones. In 1980, thanks to the activities of Kaspars Dimiters, the pastorate experienced a revival. In 1912, the pastor J. Ērmanis opened a library there with 262 volumes. Through offering valuable books, its purpose was to combat corn trashy books. The library was devastated in 1917. In the context of the Krimulda congregation, *Cross School Book* written by the local teacher Juris Natanaēls Ramanis (1797) should be mentioned – a collection of various essays, the rebellious nature of which led to a conflict with the pastor [12]. A memorial stone set up in 1993 at the roadside opposite the church was devoted to him (the sculptor Vilnis Titāns). The servant (ringer’s) house is located near the pastorate, the pediment of which is created in the fachwerk construction.

The rectory building together with the church formed the scenic and planning structure of the surrounding area. It can be made sure by examining the situation plan drawn by J. V. Krause in 1821, where every building, road, forest and the fields, the more distant cemetery are detailed [13]. It can be seen that the present road from Turaida to Ragana directly approached the church, not passing by, as it is now. Walking across the brook, it as if encircles the church and further winds along its present location. The places of peasant farmsteads can be also seen in the plan, such as Putniņi and Veģi. Some of these place names have survived to our days, such as Putniņi and Veģi. According to the plan, it can be learned that there was a barn, out-house, horse stable, and cattle-shed in the parsonage. In turn, the building of Kizbele Manor consisted of the landlord’s house, out-house, ice cellar, granary, milk chamber, storehouse, horse stable, cattle-yard, brewery, barn, and garden. It should be noted that the situation layout is not drawn by a land surveyor, so it is rough but a significant cultural and historical reference.

On the situation around the church can be also judged by the land plan of the Krimulda parsonage which in 1862 was drawn by the chivalry auditor J. E. Wruck [14]. Closer to the church, there are four small buildings, behind them – the rectory buildings, one of them – the dwelling house in the present place. Downstream of the parsonage, at the foothill a school is marked which in the plan of 1821 is not shown. In the lower part, the parsonage land borders with the Gauja, in the lower part on right the boundary goes along a brook behind which the land of Kizbele Manor is located. On the left, the land borders with the fields of Krimulda Manor and higher – with the fields of the Rodi (Rohde) home.

Historical and archaeological evidence

There is a great diversity of the cultural and historical environment in the immediate vicinity of the church. It includes the historical and archaeological evidence, the landscape, and natural elements. The 3.6 km long nature trail of Kubesele, created in 2002, starts near the pastorate. The trail, which is a broad and versatile reference leads up to the Gauja and on the way back ends in its starting point. Walking along this trail, we can get acquainted with a series of monuments – Kubesele Castle Mound where in 1991 the early Iron Age items were found during the archaeological research, the commemorative site of Caupo which is marked with a memorial stone on which there is a quote from the Chronicle of Henry (2001, sculptor – G. Grundberga). In one section of the road, it is possible to get acquainted with the Barons’ cemetery which is located in a special compartment of the old cemetery, created in 1820. The family tomb of K. von Dahl, the owner of Englärte or Engelhärte (Engelhardshof) Manor was located there, as well as the mortuary of Duke Dunten. During World War I, the latter was devastated and has not survived to our days. In the so-called Landlords’ Cemetery, pastors and their relatives were also buried. Today, two gate poles built anew in 1928 instead of the old ones lead to the cemetery which is overgrown. Information about the history of the ancient times is provided by Batariņi Mound Cemetery where the so-called Semigallians of the Gauja – the Balt tribal representatives were buried. The burials refer to the time from the 1st millennium before the birth of Christ until the first centuries of our era. They are described in the publications of the end of the 19th century [15].

In the cemetery, on one large mound, a whole family was buried in the course of time, unlike the Liv mound cemeteries where on each one only one person was buried. On the way back, opposite the pastorate on the hill, the cave of Kubesele can be seen, also called Runtiņa /the cave of Runtiņa/. It resembles a big space that is around 6 m long, but its height is about 3 m. The cave, which is a protected geological site, was formed as a result of continuous movement of the underground waters in the Upper-Devonian sandstone of the Gauja retinue. The above historical, natural, and archaeological evidence enrich the cultural and historical environment of the nearby church, reflect the developments over centuries, formed in the interaction of the human and natural environment. Each of the sites should be specially protected and cared for, their neighborhood or the cultural space should be respected without which the perception of the historical evidence wouldn’t be possible.
The cultural and historical environment and landscape

The immediate and furthest surroundings of the church are scenically appealing, intact of rashly considered structures and rich in historical evidence. The unique landscape of the church and the parsonage have impressed the coach and the local historian, the later professor of the University of Tartu – Johann Wilhelm Krause (J. E. Krause, 1757–1828), the drawing of whom was placed in the collection of drawings of J. Ch. Brotze [16]. The drawing is named according to the sentimental mood of the time of Romanticism – *A sight of the new cemetery of Krimulda, drawn from the windows of the pastorate*. At the end of the hill overgrown by trees and shrubs, two ancient mortuaries with a winding countryside road can be seen. The lovely landscape is made gloomy by a funeral procession which moves up the mound. The second drawing by J.V. Krause *A sight to Krimulda Cemetery in 1796* is also dedicated to a similar theme. But this time, from the mound we look in the other direction – to the distant church and the rectory. Between the two fragmentarily depicted mortuaries, crosses and two small wooden buildings can be seen. And the third drawing: *The neighborhood of Krimulda Church where the ancient Kubesele Castle was located* belongs to J. V. Krause. It shows a vast landscape and from the aspect of the cultural and historical information, it provides a lot of interesting revelations. On the castle mound, the parsonage
buildings are located: three log houses in the front are meant for household purposes, behind them to the right there is the pastorate but between the church and the pastorate, there is also a small house. Also, in front of the church and at the foot of the hill buildings are depicted. In the drawing, the hillfort is easily perceptible that cannot be said today – its slopes are more overgrown.

Conclusions

Already from afar in the landscape, from the road Ragana – Turaida, surrounded by the tree canopy the church tower is still visible – a significant vertical dominant. Other elements of the cultural and historical environment, as well as the rest of the building, is visible approaching them and they are of no interest in building a broad landscape of distant points of sight. And it is justified as the church is the main and most important building in the area.

In the course of time, a wide area around the church and the pastorate has retained its attractive landscape and its cultural and historical environment to a large extent – its authenticity. The conservation of this environment is a major challenge for the future.
